

Module 3) Projects

1. Describe a key project you have worked on or are currently working on

ANS>> In college, I worked on two main projects: a hospital appointment booking system and an online service provider system. These helped me improve my coding skills and confirmed my interest in becoming a software developer.

2. Explain the technologies used, the scope of the project, and its objectives

ANS>> The first project used PHP and MySQL to let patients book, reschedule, and cancel appointments online. The second project used ASP.NET and SQL Server to connect service providers with customers for services like plumbing and cleaning.

3. Highlight the challenges faced and how you addressed them, showcasing your problem solving skills.

ANS>> As a beginner in coding, I faced challenges with generating slots and managing tokens in the first project, which I solved with YouTube tutorials and some guidance. The second project was easier, but filtering services was tough, so I used YouTube tutorials to help. Persistence and YouTube were key to completing both projects and growing my coding skills.
